NEWS FOR IMMEDIATE RELEASE

**BrevAll Technologies Helps Businesses Reduce Overhead and
Boost Productivity With Remote Workers**

*Leader in Unified Communications Educates Business Owners on Remote
Workplace Capabilities*

North Richland Hills — July 31, 2017 – BrevAll Technologies, a leader in unified communications, announced today that the company is helping businesses reduce their office expenses and increase productivity by capitalizing on the growing trend of remote workers. As the modern workplace continues to be redefined, BrevAll Technologies plans to take a proactive approach in educating businesses on the benefits of a remote workforce, as well as the technology to make this transition.

With new technologies making it easier than ever before to work productively from any location, at any time, the number of remote workers has dramatically increased. While some managers are hesitant to embrace this new modern style of workplace, these numbers show no sign of slowing down, especially with the increased presence of millennials in the workplace. However, while millennials are often thought of as the primary generation forcing this workplace shift, studies have shown that that's not entirely the case. According to Pricewaterhouse Cooper's NextGen study, it was found that "64% of millennials surveyed would like to

occasionally work from home. This study also showed a slightly higher percentage, 66% to be exact, among members of Gen X and Baby Boomers that would prefer to work from home,” which implies that not only do millennials prefer a remote workspace, but everyone else in the workforce as well.

For any organization that wishes to remain at the forefront of their industry this new paradigm cannot be ignored any longer. However, the most innovative C-Level Executives are finding ways to utilize a remote workforce to increase productivity, raise employee happiness and create more profitable organizations.

Business owners that embrace the remote workforce are noticing an increase in productivity from their off-site employees. The technology that BrevAll Technologies provides enables managers and employees to collaborate through video conferencing, accessing company data, programs, etc. in a cloud-workspace environment, and utilizing a cloud-based phone inside the employee’s home. Businesses can significantly downsize their physical office and reap the rewards of reduced costs.

“Many business owners are afraid of declining productivity if they embrace a remote workforce; however, we’ve experienced quite the opposite,” stated Paul Enloe, CEO of BrevAll Technologies. “The happier our employees are, the happier our customers end up. As a result, there has been a much higher focus on delivering results and customer satisfaction.”

About BrevAll Technologies

BrevAll Technologies is a privately owned, Texas based, telecommunications sales and service company with national distribution services. It was founded in 1987 to offer customer-oriented service and competitive pricing options for a wide range of products and services.

BrevAll Technologies has the resources, experience and quality commitment to maintain preferred-vendor status with our customers.
